

TL-280-PH **TURNER**

Two Row Cup Planter

Due to skyrocketing input costs it is most important to plant as quickly and efficiently as possible to ensure a good harvest.

Planting unit drive

The TL 280 PH planting unit is powered by a chain driven directly from the wheels. The planting speed is therefore automatically regulated by the speed of the tractor, thus preventing uneven seed spacing due to varying speeds.

Seed spacing

The TL 280 PH seed spacing is very easy to regulate just by a simple change of sprockets that are supplied with the planter.

Seed sizes

The TL 280 PH can plant seed ranging from 25mm to 90mm by a change of the planter cups and/or inserts. The combination of the shaker action of the planting-cup belt and the correct size planting cup ensures that only one seed potato per cup is picked up. A 25mm sliding flow regulator allows for the handling of seed sizes ranging from "chats" up to large potatoes. The bunker allows a seed carrying capacity of up to 900kg.

Row-widths

The TL 280 PH row widths are adjustable between 650mm and 900mm.

A great plus point is the fact that the covering discs are situated directly behind the furrow openers, thus allowing for immediate covering over of the planted seed to help eliminate the seed rotting due to being covered over with warm earth.

While most planters have an average planting speed of between 2.5km/h and 5km/h, the TL 280 PH plants at an average speed of between 8km/h and 9km/h, which translates to between 5 and 6 hectares per day.

Other available optional extra's are, adjustable tines to break up hard ground in front of the planter; a stainless steel fertiliser bunker with a capacity of 400kg; a 35L temik container and 3 adjustable ridgers to form the beds behind the planter.

The TL 280 PH can deliver up to 1500kg of fertiliser and 35kg temik per hectare.

The *TURNER* TL 280 PH is backed by a complete spares service.
