

TL-430-SP

Four Row Cup Planter

TURNER

Due to relentlessly rising costs, it is of utmost importance to plant in the shortest time with the greatest efficiency possible. The TL 430 SP four row cup planter makes this a reality and will save you time, money and stress.

Planting unit drive

The TL 430 SP planting unit is driven by a PTO that is connected to the wheels. This ensures automatic regulation of the planting speed by the

forward speed of the tractor and thus eliminates irregular seed spacing due to fluctuating tractor speeds.

Seed spacing

The TL 430 SP seed spacing is very easy to regulate by a simple change of sprockets that are supplied with the planter.

Seed sizes

The TL 430 SP can plant seed ranging from in size from 25mm to 90mm by a change of the planter cups and/or inserts. The combination of the shaker action of the planting-cup belt and the correct size planting cup ensures that only one seed potato per cup is picked up. A 25mm sliding flow regulator allows for the handling of seed sizes ranging from "chats" up to large potatoes. The bunker allows a seed carrying capacity of up to 2800kg.

Row width

The TL 430 SP are adjustable between 750mm and 900mm. A great plus point is the fact that the covering discs are

situated directly behind the furrow openers, thus allowing for immediate covering over of the planted seed to help eliminate the seed rotting due to being covered over with warm earth.

While most planters have an average planting speed of between 2.5km/h and 5km/h, the TL 430 SP plants at an average speed of between 8km/h and 9km/h, which translates to up to 12 hectares per day.

Other available optional extra's are, adjustable tines to break up hard ground in front of the planter; stainless steel fertiliser bunkers with a capacity of 800kg; two 35L temik containers and 5 adjustable ridgers to form the beds behind the planter.

The TL 430 SP can deliver up to 1500kg of fertiliser and 60kg temik per hectare.

The *TURNER* TL 430 SP is backed by a complete spares service.
